

BookMyShow Clone – Web Essentials Mini Project

Implementation Plan

Project Type: Web Essentials Mini Project

Domain: Online Movie Ticket Booking System

1. Project Objective

Develop a movie ticket booking web application inspired by BookMyShow. Users can browse movies, view details, select theatres and show timings, choose seats, make a simulated payment, and receive a booking confirmation.

2. Technology Stack

Frontend: React.js, HTML, CSS, JavaScript, Tailwind CSS

Backend: Node.js, Express.js

Database: MongoDB / MongoDB Atlas

Authentication: JWT

Deployment: Vercel (frontend), Render/Railway (backend), MongoDB Atlas (database).

3. Main Modules

1. User Authentication: Registration, Login, Logout, Profile.

2. Home Page: Logo, location, search, navigation, now showing, upcoming movies and offers.

3. Movie Search & Filter: Search by name and filter by language, genre, rating and location.

4. Movie Details: Poster, title, rating, genre, language, duration, release date, description, cast, trailer and Book Tickets.

5. Theatre & Show Selection: Select location, date, theatre and show time.

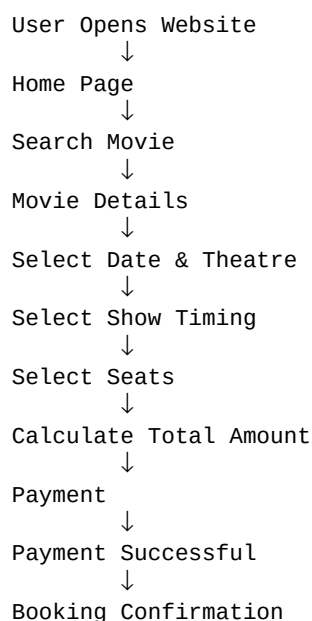

6. Seat Selection: Available, selected and booked seats with automatic price calculation.

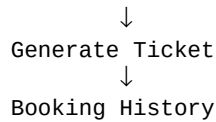

7. Payment: UPI, Credit Card, Debit Card and Net Banking; simulated payment only.

8. Booking Confirmation: Booking ID, movie, theatre, date, time, seats, amount and QR code.

9. Booking History: Previous bookings with ticket details.

4. Application Flow

5. Database Design

Users:

id, name, email, mobile, password

Movies:

id, title, poster, language, genre, duration, rating,
releaseDate, description, cast, trailer

Theatres:

id, name, location, screens

Shows:

id, movieId, theatreId, date, time, price

Seats:

id, showId, seatNumber, status

Bookings:

id, userId, movieId, theatreId, showId, seats,
totalAmount, bookingDate, paymentStatus

6. Suggested Folder Structure

```
bookmyshow-clone/  
  frontend/  
    src/  
      components/  
      pages/  
      assets/  
      services/  
      App.jsx  
      main.jsx  
      package.json  
    backend/  
      models/  
      routes/  
      controllers/  
      middleware/  
      server.js  
      package.json  
  README.md
```

7. Important Pages

- 1 Home
- 2 Login
- 3 Signup
- 4 Movie Listing
- 5 Movie Details
- 6 Theatre Selection
- 7 Show Selection
- 8 Seat Selection
- 9 Payment

10 Booking Confirmation

11 Booking History

12 User Profile

8. Additional Features

Wishlist, Dark Mode, Movie Trailer, Offers/Coupons, QR Ticket, PDF ticket, Booking Cancellation and Admin Dashboard.

9. Admin Module

Admin can add/update/delete movies, manage theatres and shows, update ticket prices, view users and bookings, and monitor total revenue.

10. Testing

Test registration, login, search, filters, movie details, theatre/show selection, seat selection, price calculation, payment, booking confirmation, duplicate-seat prevention, booking history and logout.

11. Final Project Demo Flow

- 1 Open Website
- 2 Login
- 3 Search for a Movie
- 4 Open Movie Details
- 5 Click Book Tickets
- 6 Select Theatre
- 7 Select Date
- 8 Select Show Time
- 9 Select Seats
- 10 Show Automatic Price Calculation
- 11 Select Payment Method
- 12 Complete Simulated Payment
- 13 Show Booking Confirmation
- 14 Show QR Ticket
- 15 Open Booking History

12. Minimum Features for Mini Project

User Login/Signup, Home Page, Movie Listing, Search, Movie Details, Theatre Selection, Show Timing Selection, Seat Selection, Automatic Price Calculation, Payment Simulation, Booking Confirmation, QR Ticket, Booking History and Responsive UI.

13. Project Outcome

The final application provides an end-to-end movie ticket booking experience where users can browse movies, select a theatre and show, choose seats, complete a simulated payment and receive a digital movie

ticket.
